- Special and bespoke sizes available by request
- Frosted or plain ends
- Available in three different finishes for your specific application
- Clipped corners for improved handling
- Packed in moisture proof packaging

Please see catalogue for further details.

STANDARD SLIDES

Solmedia's standard size plain and twin frosted slides for most microscopy applications are sold in packs of 50. They come with calibrated dimensions of 76.2 x 25.4mm and are available in thicknesses of 0.8 to 1mm or 1 to 1.2mm. All come pre-cleaned, with ground edges or optional polished edges for blood film application. Please check availability when ordering. Twin frosted slides come with an optional feature of clipped corners. This improves safety when handling and is also available by request on other sizes too.

SPECIAL SLIDES

Large slides are available in two standard sizes, 76 x 38mm and 76 x 52mm. Both are 1 to 1.2mm thick, pre-cleaned and with ground edges. Both are available either plain or twin frosted to your choice. The 76 x 52mm are also available with 7mm or 20mm frost depending on whether you require a larger space for writing or surface area for large sections.

These also come packed in a box of 50. Other bespoke sizes available on request.

COLOUR CODED SLIDES

Solmedia's Colourslides are colour coded 76 x 26 x 1.1mm slides and are ideal in their application for identifying different specimens. These are available in 6 colours. They have 90°ground edges and also have the feature of clipped corners too. Solmedia also supplies the Superfrost® brand.

POSITIVE CHARGED AND ADHESIVE SLIDES

Solmedia's Plus+Frost slides have a permanent electrical charge which attracts tissue sections and reduces the loss of cells in cytological preparations. These are currently stocked with a white colour coated end for marking and also have the 90°ground edges and clipped corners. There are 72 in a pack. Other colours are available but please check with our sales department before ordering as they may not be available from stock. Solmedia also supplies the Superfrost Plus® brand.

Solmedia also source Superfrost Plus Gold® slides which have the same features as the Superfrost Plus® only that they adhere sections with a thickness above 20 micron.

Solmedia's PolyFrost brand slides have the benefit of an adhesive poly lysine coating giving a better adhesion of cells and tissues, and also reduces loss of cells during staining. These are sold in packs of 72. We can also supply Polysine® slides.

OTHER PRODUCTS AVAILABLE

For more information on our products associated with microscopy please contact our sales for details. Did you know that we hold one of the widest ranges of Coverglasses available? As well as being extremely competitive for the standard sizes, we also stock a large variety of special sizes including circles for many special applications. Once again we also supply bespoke sizes made just as you require them.
