- Fast next-day delivery on stock lines*

** Available to most of UK and Northern Ireland. Terms and conditions apply.*

PARAWAX PURE

ParaWax Pure is a refined paraffin wax pelletised in semi translucent form. This product has no added polymers making it possible to cut thin sections with minimal compression of tissue. It has a melting point of 56°C.

Ref.	Description	Unit
WAX010	ParaWax Pure	10kg

POLYWAX

PolyWax is a high quality micro-crystalline wax with minimal added polymers for improved infiltration of tissue with a melting point of 57 to 58°C.

Ref.	Description	Unit
WAX020	PolyWax	10kg

DIAWAX

Similar to PolyWax, DiaWax has extra added polymers for improved cutting with a melting point of 57 to 58°C. DMSO free.

Ref.	Description	Unit
WAX020D	DiaWax	12.5kg

PARAMAT®

Pastillated 'Gurr' blended with synthetic polymers.

Ref.	Description	Unit
WAX030	Paramat	10kg

PARAPLAST®

Paraffin wax has a P.I.B. additive (Polyisobutylene) and is DMSO Free. Melting point is 56 to 57°C.

Ref.	Description	Unit
WAX050	Paraplast	8kg

ULTRAPLAST

UltraPlast Premium embedding medium has a P.I.B. additive (Polyisobutylene) and has excellent infiltration properties for improved impregnation of tissue. It has a melting point of 54 to 57°C.

Ref.	Description	Unit
WAX060	UltraPlast	5x2kg
