

CASE STUDY

University Hospital Southampton invest in **Ergotec**

With wellbeing at the forefront of their investment, UHS unveiled four new Ergotec workbenches to accommodate the needs of their diverse team.

In an environment where throughput is continually increasing, staff welfare plays an important role in meeting these demands. Recognising this, UHS gained insight from its team to identify key areas for improvement.

NHS Foundation Trust

Championing Ergonomics

A noteworthy investment for UHS, the purchase and installation of four Ergotecs was backed by the laboratory team who highlighted the benefits of the workbenches.

- Ability to work standing or sitting
- Adjustable to meet a diverse workforce
- Efficiently move between tasks
- Reduced strain resulting in extended periods of work
- Improved staff attendance and reduced sick rate

"I love the Ergotec."

- Patricia Goggin, University Hospital Southampton

The Ergotec Workbench

Combining an electronically adjustable base with an integrated histology-specific equipment worktop and completely customisable to your lab requirements, the Ergotec has been designed to improve comfort and workflow. The ergonomic design nurtures the needs of the user to create a continuous positive experience when at work whilst also mitigating strains and preventing long-term injuries.

Delicate Work

The Ergotec's in-built anti-vibration offers effective stability for routine histology practices, including microtomy. At the University Hospital Southampton, Ergotec workbenches were installed in areas where extra-sensitive work, including electron microscopy, is performed. For these environments, an anti-vibration mat can be added to eliminate even the slightest movement.

"Everybody is impressed with the height adjustable features and the level of comfort. Staff had raised issues with bad backs, sore wrists and fatigue - the Ergotec's ergonomic design helps to eliminate these. Staff across the hospital are keen to have them in their departments!"

- BIU Team, University Hospital Southampton

A Bespoke Design

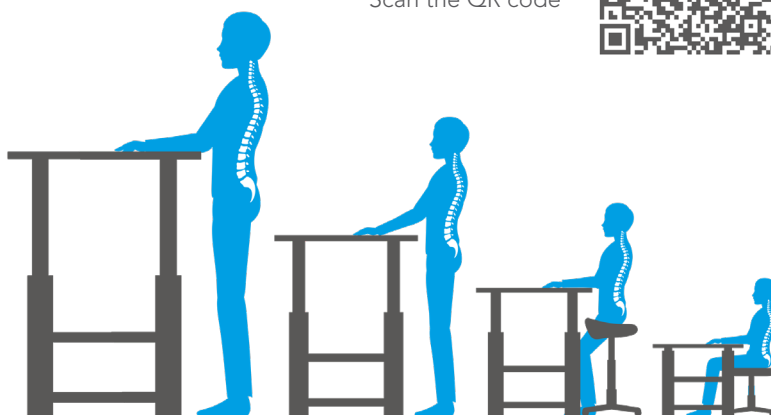

Key Features

- Vast range of height adjustability
- 4 different recall table heights
- High load capacity up to 400 kg
- Variable selection of table width and depth
- Integrated equipment
- Individually customisable cable channel

OPTIONAL EXTRAS: Integrated Water Bath, Integrated Cooling Plate, Cable Channel, Workplace with LED Illumination, Undertable Drawer, Monitor Arm and / or Workstation and Ergonomic Cutout
